Service & Accreditation UKAS Accredited Calibration

- Gives you 100% confidence in your processes
- Ensures that equipment and procedures will stand up to scrutiny
- Flexible onsite and offsite calibration/validation service
- Friendly, experienced team who will take the time to explain any work undertaken
- Easy to understand certification and documentation
- One-stop-shop for equipment supply, validation, calibration and service
- Time and temperature monitoring
- -80°C to 140°C total span
- For autoclaves, media sterilisers, temperature indicators and other temperature controlled devices

What is UKAS?

UKAS (United Kingdom Accreditation Service) is the sole accreditation body recognised by government to assess organisations that provide reliable data and results for a defined set of tests. All assessments are made against internationally recognised standards. UKAS accreditation demonstrates your on-going compliance with an array of quality standards.

Equipment that we can calibrate/temperature map includes:

Autoclaves
Media preparators
Fridges
Ovens
Water baths
Incubators
TomKeys
Temperature indicators
We can also calibrate -80°C freezers

DWS Accreditation

DWS is accredited to BS EN ISO/IEC 17025:2005 for calibration activities. This means that we have been assessed by UKAS and are able to provide calibration and validation services for heat sterilisation equipment, temperature controlled processes and temperature indicators.

The DWS Service

In order to save you the cost of expensive call outs and project delays, we can often provide essential maintenance, schedule routine servicing and carry out your UKAS calibration/validation work in the same visit. Whilst onsite, our engineers will not only take the time to explain the calibration procedure and why it is necessary but they will endeavour to provide your certification within 5 working days. This helps to make sure the whole UKAS process is as painless as possible for you and your staff.

Even if your laboratory doesn't necessarily need UKAS accreditation, the cost is comparable with that of standard calibration. This means that for added peace of mind, UKAS calibration/validation could be a very shrewd investment. And because we can carry out any repairs or servicing at the same time, this can help avoid the cost of additional call outs and reduce down-time in your laboratory.

The technical expertise employed within Don Whitley Scientific for designing and manufacturing our own microbiology equipment provides an ideal background for our UKAS-approved calibration engineers. As well as supporting our own products, our engineers are approved to calibrate and validate laboratory autoclaves, temperature monitoring systems and sterilisers.

Additional services

Don Whitley Scientific has an established after sales service, with a team of highly trained engineers operating throughout the UK servicing and maintaining an extensive range of automated and semi-automated equipment, including autoclaves, media sterilisers and temperature monitoring systems.

Scientific guidance is also available from our own GLP-compliant, in-house contract microbiology laboratory.

Your queries answered – no obligation

If you have any additional questions about UKAS or would like any additional information about the benefits that this service could bring to your laboratory, please contact us today for a no-obligation consultation.
